Customize and Control

Features:

» Versatile

Offers both vertical and horizontal positioning to P/T camera movement. Track lengths and configuration are made to your specifications

» Compatible

The belt driven track system is a remotely controlled camera positioning system. It is controlled using Telemetrics Camera Robotics

» Precise

Optional precision X-Z (~13,000 count/inch) position encoders are available for use with Virtual Studio applications. Positional information is combined via the Telemetrics P/T Heads, processed into a serial data format and sent to the Virtual Studio Computer
